

Join Our Team at the University of Central Lancashire!

Are you passionate about pharmacy and eager to inspire the next generation of pharmacists? If so, we would love to hear from you!

About Us

At the University of Central Lancashire, the School of Pharmacy and Biomedical Sciences has a dedicated team at the forefront of transforming students' lives. We focus on providing students with real-world learning experiences inside state-of-the-art facilities that reflect the environments they will encounter in their professional careers.

At the University of Central Lancashire, we are committed to raising aspirations and empowering people to flourish in education, work, and life. We offer opportunities to individuals from all backgrounds, support our local communities, and conduct research that has a real-world impact. We are a true community on an international scale, and every colleague plays a vital role in achieving our vision. We strive to create a welcoming and engaging environment where everyone is supported and empowered to deliver their best work and achieve their potential.

Sessional Opportunities available

Pharmacy is evolving, with pharmacists playing an increasingly vital role in providing health services and person-centred care. This is an opportunity to help pharmacists rise to the challenge and develop these essential skills.

We welcome expression of interest from pharmacists and pharmacy technicians from all backgrounds and sectors to support the delivery of pharmacy courses within the school. This role can support your personal development, for example, by contributing to the Royal Pharmaceutical Society credentialing through the education pillar of the post-registration foundation curriculum. Support will be provided by an academic member of staff, and travel expenses will be covered. Honorary clinical lectureship positions may also be available.

Are you interested in contributing at the undergraduate and/or postgraduate level? Sessional opportunities include:

- OSCE facilitation, including marking
- Portfolio marking for the Advanced Certificate in Independent Prescribing
- Expert lecturing in areas such as clinical practice, research, education, service delivery, governance, leadership, public health, digital health, clinical trials, genomics, personalised medicine, diagnostics, and clinical skills
- Providing careers advice and mentoring

Research opportunities may also be available, so please mention on the form if this is something you are interested in pursuing.

If you are enthusiastic about this opportunity, please complete the MSForm to apply.
