At the end of the programme you will need to complete a short reflective assessment.	Please click HERE to register your interest in booking a place on this course.

Study days delivered by Et al Training

Provided by Et al Training

Course Name	Description	Learning Outcomes	Date & Location	Register your interest by clicking on the link below
Hypertension Study Day	<p>An interactive and informal study day designed for the multi-professional primary care team.</p> <p>13% of the national population are currently diagnosed with hypertension, but the majority of BP and hypertension management does not need to hit the GP.</p> <p>This study day will look at the diagnosis of hypertension, the use of ambulatory & home monitoring, physiology of the normal management of blood pressure, causes & management of hypertension, how BP drugs affect the system, complicated and rarer causes of hypertension, with a look at some clinical cases.</p>	<ul style="list-style-type: none"> Understand the importance of hypertension and relevance in prevention of CVD Understand the principle of diagnosis and management in the primary care and the team's roles Understand the rationale behind the National Clinical Guidelines for the management of hypertension in patients in primary care 	<p>Live online one-day course delivered over Zoom</p> <p>Friday 21st November 2025</p> <p>Full day course (09:00-16:00)</p>	<p>Click HERE to book your place on this course</p> <p>Limited spaces!</p>
Cardiovascular Disease Study Day	<p>The day will provide an overview of CVD and who is at risk. It will go on to focus on the prevention, diagnosis and management of:</p>	<p>The aim of the day is for healthcare practitioners to acquire knowledge of CHD, stroke and TIA so they have the confidence to care for</p>	<p>Live online one-day course delivered over Zoom</p> <p>Friday 30th January 2026</p>	<p>This course is now full.</p> <p>Please email jenny.cole4@nhs.net to be added to the waitlist.</p>

	<ul style="list-style-type: none"> • CHD including stable angina, acute coronary syndromes and myocardial infarction • Stroke & transient ischaemic attacks (TIAs) • Atrial fibrillation (AF) in stroke prevention <p>We start with the importance of CVD, who is at risk and how it can be prevented. This will include lipid lowering in primary care.</p> <p>We go on to consider CHD in more detail. How the heart works and how it helps itself during episodes of angina. We explain the difference between stable angina and acute coronary syndromes and how these conditions present in primary care. Using clinical cases, we discuss making the diagnosis of CHD and the role of lifestyle choices, medication and revascularisation in controlling symptoms and increasing life expectancy.</p> <p>After lunch we move on to consider the diagnosis and management of stroke and TIA. Meet the dancing heart and the clotting chef to understand the importance of the diagnosis of atrial fibrillation (AF) and role of anticoagulation in preventing embolic stroke.</p> <p>Throughout the day we will refer to current National Guidelines and pathways.(NICE)</p>	people with these conditions effectively in Primary Care.	Full day course (09:00-16:00)	
--	--	---	-------------------------------	--

Heart Failure Study Day	<p>In this study day we begin by setting the national scene and clarify the diagnosis of heart failure which interestingly is not the underlying diagnosis! We then move on to the pathophysiology of heart failure, with a “sad story” which recounts the reactions from the body when the heart fails and lays out in a memorable non PowerPoint manner the systems which are involved in the body. This story then becomes the basis of understanding for the management of heart failure from the routine to the complex, where a “daddy dancing” approach to understanding biventricular pacing comes in handy. Keeping us focused on real life general practice we round off the day with some clinical cases to discuss the obscure and to consolidate the learning.</p>	<p>At the end of the day you will understand</p> <ul style="list-style-type: none"> • The practice population at risk of developing heart failure • The impact of heart failure on the individual and wider practice population • The importance of effective management for those with heart failure • The benefits and monitoring of pharmacological interventions available for treatment 	<p>Live online one-day course delivered over Zoom</p> <p>Friday 12th December 2025</p> <p>Full day course (09:00-16:00)</p>	<p>Click HERE to book your place on this course</p> <p>Limited spaces!</p>

---	--	--	--	---

PITstop: 2.5-day-Programme for Injectable Therapies Course	<p>This popular, practical 2.5-day advanced course gives multi-disciplinary, practice teams the resources to work towards enhanced diabetes service provision for injectable initiation (type 2 diabetes only).</p> <p>We recommend PITstop students seek mentorship after attending the course, to ensure they embed the skill safely in clinical practice. Please identify someone in your practice who could fulfil this role. The supervisor/mentor needs to be a practitioner who has (ideally) completed an accredited course <u>AND</u> they are actively initiating and titrating insulin and GLP-1s. So this could be a GP, pharmacists, ACP or DSN.</p> <p>Please Note: This course is suitable for Practitioners working at an advanced level who are already experienced in providing a diabetes service. Ideally having attended a foundation level diabetes course or can provide evidence of self-directed learning, focusing on the oral diabetes medication pathway.</p>	<p>Programme summary</p> <ul style="list-style-type: none">• Revision of diabetes oral medications• GLP-1 Agonists, including initiation using a structured care pathway• Insulin: building the profile• Injection technique• Device workshop• Detective work at review appointments focusing on injectables• Insulin safety (self-directed learning)• When is insulin indicated?• Working through the PITstop insulin pathway to assess for insulin, initiate an appropriate insulin regimen and support the patient for the first 6-months: a case study approach• Changing insulin regimens• Dietary considerations and insulin, including minimising weight gain• Decisions about injectable therapies: a case study approach	<p>Courses are currently being delivered live, online. Duration 17.5 hours over 2.5 days. The first two days are held together and the half-day follow-up is approximately 2 months later.</p> <p>You MUST be available to attend all 2.5 dates of the course cohort</p> <p>Current dates are shown on the booking link —————></p> <p>(More dates to be added soon)</p> <p>Each cohort has limited spaces and may fill up quickly.</p>	<p>Click HERE to book your place on this course</p>
